

OLSON SPORTS COMPLEX

The Clark Enersen Partners was selected to design the new \$5.4 million Olson Sports Complex in Palmyra, Nebraska. The complex features a new football stadium with artificial turf, bleachers, press box, team meeting rooms, concessions, and restrooms. The football field is surrounded by a 400-meter performance track which will allow the school district to host track meets, something they were not able to do before. The project also includes construction of a new baseball field, park, and walking trails with a connection to the high school facility along with renovations to the existing softball field, concessions, and restroom facilities located at the city park. The football stadium was completed in August of 2019 while the rest of the complex is scheduled for completion in 2020.
